

The **Santa Clara Flow** is a remote, marshy waterway located within the Adirondack Park in northern New York, connecting the St. Regis and Madawaska rivers. The flow provides a picturesque backcountry paddling destination, known for its scenic views. It is an ecologically significant area, attracting paddlers and nature enthusiasts. Access is sometimes limited, with conditions varying based on conservation easements and logging activity.

Map created by Andy Arthur on 10/22/2025 in QGIS 3.44.3-Solothurn. Contains NYS GIS and DEC data with additional campsites added by Andy. More maps at andyarthur.org.
